Work Experience

06/2018 – Present
Bangalore

Sabre Travel Technologies India Pvt Ltd, *Principal Software Engineer*

Project: SabreMosaic

- SabreMosaic is Sabre's modern modular airline retailing and passenger services system (PSS), combining capabilities from SabreSonic (Full-Service Carriers) and Radixx (LCC carriers).
- Implements the IATA NDC (New Distribution Capability) and ONE Order standards, supporting the full airline retail lifecycle: Shopping → Pricing → Booking → Payment → Order Management → Fulfillment → Cancellation/Refund.

Key Projects & Achievements

- Order change notifcation design and build system which will send notifcation incase of any modifcation into order to agency
- Lead NDC IATA certifcation and get certified OMS API with IATA community
- Design and build order history application which will show all historical changes for the order
- Design and build agency onborading paltform for sabre mosaic application
- Design and build carting mechanism through which agency/user can store all inventory before procced for boooking
- Clean Architecture Alignment – enables a domain-centric, testable, infrastructure-independent approach to system development
- Production Readiness – Non-functional tests, Automated Security Scans, Code Quality Scans, Open-Source Licenses Usage Alignment, CI/CD, Green-Blue Deployment Strategy
- Compliance – PCI, PII / GDPR
- Build new agent which help to triage JIRA and fix bugs

Responsibilities:

- Design, Development, Work Planning, Proof of Concepts Implementations
- Business and Technical Requirements Analysis
- Technical Backlog Definition
- Work execution with Team Leads
- Technical Advisor for Cloud and Container Related Technologies
- Architecture Design, Costs Calculations, Work Efficiency Improvements Calculations

06/2013 – 06/2018
Bangalore/PARIS

Societe Generale, *Senior Tech Lead*

- Project: PRB, SPARK and FIDESSA
- Designed and enhanced multiple front-to-back trading and structured-product applications, including PRB, SPARK, and FIDESSA, delivering scalable, high-performance solutions for global financial markets.
- Built the PRB structured products platform supporting complex instruments (Reverse Convertible, Auto-Callable, Share Accumulator, OTC) with multi-underlying pricing logic and workflow orchestration using TIBCO.
- Integrated rule-based processing through Drools Workbench for marketing data transformations, and built a Kafka + Confluent-based POC for high-throughput market-data streaming.

Key Projects & Achievements

- Build next gen platform to supproting trading for structure product(Reverse convertible,Auto callable and OTC product)
- Design CI and CD process for newly build application
- Build platfrom which will send saled report for every end of the of all transaction

- Business and Technical Requirements Analysis

Responsibilities

- Design, Development, Work Planning, Proof of Concepts Implementations
- Business and Technical Requirements Analysis
- Technical Backlog Definition
- Work execution with Team member
- To make sure clean architectire and SOLID principal should be followed during development

06/2011 – 06/2013
Chennai/USA(new Jersey)

Ericsson India Private Limited, *Senior Software Engineer*

- Project: BCS(Broadband charging System)
- Built a comprehensive broadband charging solution (BCS) enabling real-time charging, subscriber management, self-service recharges, and billing support for telecom providers.

Key Projects & Achievements

- Convert and ingest daily transaction feeds into the HDFS data lake with fault-tolerant, idempotent pipelines
- Customizable BCS Solution: Design a Business Continuity & Compliance (BCS) solution configurable per region and country
- Legacy → Spring Migration: Re-platform the legacy application into the Spring ecosystem for maintainability and scalability

Responsibilities

- working with team lead to get development work
- Understand Business and Technical Requirements Analysis
- Implementations of use case
- Work execution with Team member
- To make sure clean architectire and SOLID principal should be followed during development

06/2008 – 06/2011
Chennai

TCS, *Senior Software Engineer*

- Developed and optimized REST API for policy, claims, and customer onboarding workflows, enabling seamless online insurance purchase and management.
- Improved system reliability and release efficiency through JUnit/Mockito testing, Swagger API documentation, and CI/CD pipelines using Jenkins, Maven

Skills

- JAVA 21
- AI Agent
- GRPC
- REST API
- MCP API
- Spring web services
- Spring boot
- KAFKA
- Kubernetes
- Docker
- Design pattern
- GCP pub/sub
- GCP Bigtable
- GCP cloud spanner
- GCP cloud function
- GCP secrets manager
- GCP Firebase
- GCP cloud storage
- SOAP web service
- DSA
- Problem solving
- Jenkin
- Plant UML
- Python
- Grafana
- Lostash
- ELK

Education

07/2003 – 07/2007
Tumkur

B.E in computer science, *Visvesvaraya Technological University*

- Computer science

Languages

English
Full Professional Proficiency

Hindi
Native or Bilingual Proficiency

Certificates

- JAVA sunmicro system

HONOR AWARDS

01/08/2018 **Blitz code,** *Sabre Travel Technologies India Pvt Ltd*

01/11/2015 **Start of Quarter Award,** *Societe Generale*

Certificates

08/2015 – 08/2018 **AWS Solution architect**

HONOR AWARDS

12/2017 **Employee of the year,** *Societe Generale*

06/2016 **Best Cloud Practitioner Award,** *Societe Generale*

Interests

Cricket • Watching movie
